WELCOME TO THE SMART MEETING ROOM OCHNO

OCHNO – one cable, several functions.

OCHNO creates a user-friendly meeting room: the plug & play solution enables users to enter into discussions quickly and easily. At the same time, users can switch between their own devices and a permanent video conference system, share media content easily and charge devices at the same time. Just one cable necessary!

OCHNO is designed for ease of use and can be installed in any meeting room – a USB-C cable is used to connect to the user's end device, e.g. their own laptop. An elegant socket in the tabletop (including show-me button) is used to create a connection to the hub below the table and for switching the device. Special feature: The hub establishes a connection to every device, regardless of manufacturer and operating system. It is also possible to share media and charge via USB-C.

98 %

of employees would like to work from home at least some of the time and 65 % say they would like to work from home completely.

Video conferences: connect and get going

Laptop content can be shared in active video conferences with the OCHNO Dynamic Switch without having to be logged in separately. The Plug & Play concept does everything without you having to install drivers or apps.

OCHNO: easy to install, modern design and smart for your meeting room.
